***Allowable Subject Matter***

1. Claims 25-44 are allowed.

***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:

The prior art taken singly or in combination does not teach or suggest, a LED backlight for an LCD display, among other things, comprising:

a first sub-array controller controls the operation of the first sub-array switch in the first ON state and a second sub-array controller controls the operation of the second sub-array switch in the second ON state in a mutually exclusive manner.

The closest prior art, reference Bohn et al. (U.S. Patent No. 6,618,031) teaches a backlight system for an LCD display including:

a first secondary circuit coupled to a primary circuit comprising: a first sub-array of LEDs of first color (RED color), a first sub-array switch;

a second secondary circuit coupled to the primary circuit comprising: a second sub-array of LEDs of second color (GREEN color), a second sub-array switch;

each of the sub-array switches is turn ON by a different control signals (i.e. RED enable, GREEN enable, and BLUE enable signals)

However, the sub-array switches as taught by reference Bohn et al. are turned on in a time sequential manner, and not independently controlled by a separate controller for each sub-array switch, and thus not operated "in a mutually exclusive manner."
